The aim of this session is to promote PMR for children. Target groups of the symposium are experts involved in the interdisciplinary treatment of children with physical impairments or neurodevelopmental disabilities.

This session will enhance the expertise and knowledge of all specialties involved in the paediatric rehabilitation team including neuropaediatricians, surgeons, and physiatrists.

We expect to benefit from the expertise and contribution of neuropaediatricians, surgeons, physiatrists, and all specialties involved in the paediatric rehabilitation team.

Major topics are:

- assessment and management of spinal cord lesion in children;
- cerebral palsy;
- spasticity;
- research in paediatric rehabilitation;
- traumatic brain injury;
- how can the rehabilitation medicine helps in the process of transition from childhood to adulthood;
- quality of life;
- care network for disabled children;
- orthotic seating management and orthotic spinal support.

The conference will include French and European invited speakers, videos, and posters.

Multiple disciplines are expected, the topics must reflect interdisciplinary research methods and further advances in our understanding and clinical management of paediatric MPR.

Target audience: physiatrists, physical therapists, surgeons, child neurologists, paediatricians, rehabilitation professionals, neuropsychologists.

B. Chabrol

Président de la session Pathologie de l’enfant et de l’adolescent
