Available online 25 October 2012

The above article was unfortunately published with an incorrect title and affiliations. The title and affiliations should have been printed as above.

In addition, the sentence in relation with the French haemovigilance data should have been as following:

“Thus, the French haemovigilance reported for more than three million products to 550,000 patients in 2010, three deaths probably or certainly attributable to transfusion, among which one bacterial infection and one acute haemolysis, and otherwise one viral (CMV) contamination [1].”

Lastly, the disclosure of interest statement had been provided and is now added:

**Disclosure of interest**

Other than being employed by the Établissement Français du Sang, the French transfusion public service, authors declare no potential conflict of interest.

Changes have also been added to the supplementary information:

**Appendix A. Supplementary information**
